

# MELİKE ASLAN

## JUNIOR SOFTWARE DEVELOPER

### ABOUT

I graduated from Istanbul Fatih Sultan Mehmet Vakıf University in September 2021. I enjoyed studying engineering because of I am a person that interested in technological developments and innovative ideas. I aimed to raise myself as a qualified and versatile engineer with my projects and internship experiences during my undergraduate education. I have gained experience in basic subjects such as working as a team, having self-motivation and doing research. As you can see in my resume, I prepared myself for business life with different trainings and individual researches. At the same time, I was interested in software with the programming lessons. After graduating, I decided to specialize in Software Science. I feel really empowered and confident about software development with the Bootcamps I attended and the Web Programming Course (İşkur-NBUY Program) I completed at Kadıköy Network Academy.
